

Technical Info - Skovby Remote Link®

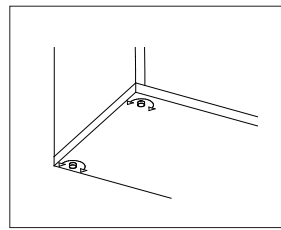

The Remote Link electronics work within the frequency area of 30-60 KHz. This means that it is compatible with basically all remote controls using infrared light. (B&O equipment excepted). The receiver electronics are built into a metal pipe behind the logo plate. Inside the cabinet there is a signal booster to which the transmitters are connected. The system works in such a way that when you point your remote control at the logo plate, the electronics inside the cabinet will repeat the signal so that you can control the equipment even though it is hidden inside the lowboard.

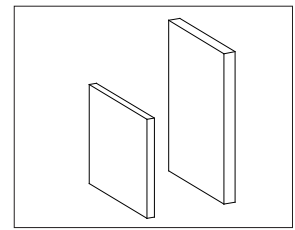

Flow through ventilation
AV equipment must not overheat. All Skovby TV/Hi-Fi furniture is therefore equipped with flow-through ventilation.

Adjustable shelves
#772, #773, #723 & #742 have adjustable shelves. This gives you maximum flexibility when placing your AV equipment in the furniture.

Integrated levelers
Not all floors are even. All Skovby TV/Hi-Fi furniture is therefore supplied with easily adjusted levelers.

CD/DVD Jewel case
The drawers are designed for storing CDs and DVDs.
